

Video – Illusion/Special Effects

This is your final formative evaluation. Each student must submit a different project, but others may assist you in this task

Use the skills that you have developed in your photo-essay project, and your stop motion film to create an illusion using the stop-video technique. Also add in effects created with transitions, and with effects as well.

Use several camera angles and transitions in your first film.

Your illusion film should be 30 seconds in length.

Save your video as illusion.avi

Burn this on your disk prior to the break.
