

Tilt Shift

Follow this steps to create a miniaturization illusion. i.e. Your image should look like a toy.

1. Choose or take a photo that has some depth to it. i.e. A distance shot.
2. Open it in photoshop.
3. Duplicate it.
4. Blur this layer via the Gaussian Blur filter. Level 8 should be fine.
5. Go back to you unblurred layer. Circle the part of the photo that you want to be in focus.
6. Go to select – choose feather – experiment with the levels.
7. Go to layer via cut. This will create a layer that is just your feathered selection.
8. Delete what is left of the previous layer (the unblurred remnant).
9. Make sure that the feathered layer is on top.
10. Flatten the image.
11. Experiment with the saturation levels.

Complete three of these tilt shift photos.

Save as firstname_lastname.tiltshift.jpg. Also save your original pictures.

Place this project in the in the digital photography folder.
